

Short CV

	BORNEHAG CARL-GUSTAF
	Professor
	Karlstad University/Icahn School of Medicine at Mount Sinai
	Sweden/USA
	<p>My research focuses is on early life exposure for environmental factors (e.g., EDCs, food and nutrition, life styles etc.) and the importance for children´s health and development including better risk assessment of chemical mixture exposure. Our empirical base is two major epidemiological studies in Sweden, the Dampness in Buildings and Health (<u>DBH</u>) study following more than 10,000 children from childhood up in adulthood and the <u>SELMA</u> study following more than 2,000 mother-child pairs from early pregnancy, over birth and up in school age. I am co-investigator in three EU-projects (<u>EDC-MixRisk</u>, <u>ENDpoiNTs</u>, <u>ATHENA</u>) awarded with 6 000,000 Euro each and one US project (<u>PRIME</u>) awarded by NIH with 2 500,000 USD. Published 92 peer review articles due to Web of Science.</p>
